PAH is a silently progressive disease

THERE'S NO TIME TO LOSE **ADD UPTRAVI**

Early treatment with UPTRAVI
can significantly improve your
patient's long-term outcomes

INDICATION AND SAFETY INFORMATION¹

Uptravi is indicated for the long-term treatment of PAH in adult patients with WHO functional class (FC) II-III, either as combination therapy in patients insufficiently controlled with an ERA and/or a PDE-5 inhibitor, or as monotherapy in patients who are not candidates for these therapies.

Efficacy has been shown in a PAH population including idiopathic and heritable PAH, PAH associated with connective tissue disorders, and PAH associated with corrected simple congenital heart disease.

Uptravi was generally well tolerated in the overall population. Most common adverse events were typical of drugs that work on the prostacyclin pathway. The majority were mild to moderate and less frequent in the maintenance phase.

Please refer to full Prescribing Information for UPTRAVI for details.
